

SAP Performance Optimization

One of the main tasks of an IT manager is to ensure the consistently high availability and performance of his SAP systems.

Despite thorough precautions and good maintenance, unexpected performance issues can occur. Help is available with the SAP EarlyWatch™ Reports. But interpretation of all the data collected in this way requires profound knowledge of SAP technology and cross-platform expertise. This “Consulting in a Box” package was developed for this reason. We show you how to interpret the recommendations from our reports properly and so significantly improve the performance of your systems. In addition, we measure your SAP transactions and help you to find the relevant measurements and to react appropriately to them.

Benefits

- » You receive a differentiated and weighted evaluation per measurement range (for example, DB, SAP buffer, response times).
- » You know the strengths and weaknesses of your SAP systems.
- » You optimize your SAP systems highly efficiently. You only receive implementation recommendations which we strongly recommend.
- » You improve the performance of your SAP systems through increased reliability and enhanced availability.
- » You expand your SAP expertise by practical knowledge transfer.
- » You receive a comprehensive documentation with optimization recommendations.
- » Regular implementation of our CBS01 service allows you to document the continual optimization of your SAP systems.

SAP Performance Optimization

Objective

- » Sustained improvement in productivity by focusing on developing employee skills regarding understanding, interpretation and optimization of performance issues
- » Optimization of system operation through improved interaction between databases, operating systems, network components and SAP application servers.
- » Cost reduction through optimization of the SAP system and the affected business processes.

Our Services

- » Step by step we analyze your SAP system and optimize it under the following aspects:
 - Hardware bottlenecks
 - SAP, DB and OS parameterization
 - Workload distribution and RFC load distribution
 - Analysis of response times and causes of poor response times
 - Long-running and expensive SQL statements, transactions
- » Together, we analyze your EarlyWatch™ Reports
- » We explain what the individual metrics and recommendations mean and how they can be interpreted and implemented.
- » We plan the implementation of the recommendations with you.
- » We document the measurement results and recommend further project steps.
