

Microsoft SQL Server – Optimization of the Database Infrastructure

Data and the resulting information are the basis for corporate decisions. Storing them economically and protecting their existence at all times is currently one of the most important tasks of IT.

This “Consulting in a Box” package supports you in designing the optimal database infrastructure for your company, taking into account growing data volumes, increasing complexity of applications and system landscapes.

To do this, our consultants analyze your database systems for previously unused consolidation options. You will learn how you can improve the administration of your databases and save licensing costs through an optimized database infrastructure. We present optional high availability concepts and recommend an individual solution for a fail-safe DB infrastructure.

Your benefit

- » **Cost savings:** You can save on licensing costs through database consolidation.
- » **Optimization:** We show you how to optimize the administration of your database infrastructure.
- » **Transparency:** You get an analysis of your current SQL Server databases from a multi-instance and high availability perspective.
- » **Comprehensive:** Benefit from comprehensive consulting for database sizing.
