# Establishment of Hybrid Exchange Solutions

## Connecting Field Offices and Field Staff

Companies with branch offices or a large number of field staff are often faced with the question of how to connect these users to the centrally provided Exchange organization. It is not uncommon for available Internet bandwidth to turn out to be a bottleneck, or the connection does not to meet the company's requirements for reliability and fail-safety. It is precisely in such scenarios that the use of an additional hosted Exchange environment can help. For this purpose, a network is set up between the local and a hosted Exchange organization. This hybrid Exchange solution makes it possible to distribute the users' mailboxes across both organizations. The mailboxes of the local users remain on the local organization, while those of the field offices and field staff are moved to the hosted Exchange organization.

This "Consulting in a Box" offer accompanies you on your way to a hybrid Exchange solution. We show you how to build a unified Exchange landscape from on-premises and hosted Exchange servers. In doing so, we ensure that your users can use all functions such as out-of-office, display of availability information, etc.

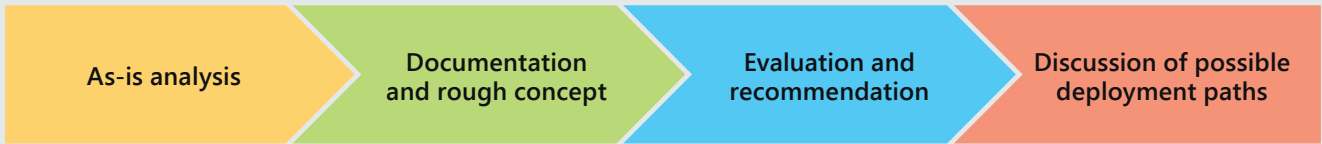

### Your benefit

- » **Keep an overview:** Get an overview of your current network from the perspective of an Exchange hybrid deployment.
- » **Deepen your technology know-how:** We explain the changes in managing your Exchange environment.
- » **Become „best practice“:** we present possible deployment paths, determine project scope and recommend the best approach for your organization.
- » **Benefit from our experience:** You work with senior Exchange consultants from a Microsoft Gold Certified Partner.
- » **You decide how to proceed:** You receive a rough concept tailored to your company.
- » **You receive comprehensive cost transparency:** We determine the license and project costs.

V3.0

## Establishment of Hybrid Exchange Solutions Connecting Field Offices and Field Staff

### Objective
