

# Windows as a Service

## Operation of Windows 10 with WaaS

With Windows 10, Microsoft has a new update strategy: Windows as a Service. This has several advantages, such as continuous development by Microsoft and new functions. In regular cycles (spring/autumn), Microsoft releases new "Feature Updates". But there is also a downside: The limited support period for feature updates forces companies to distribute the new feature update to all clients in the shortest possible time. This installation is equivalent to a new installation of Windows. For trouble-free operation, these updates must be well planned and tested.

With this Consulting-in-a-Box package, you will learn how to implement the new operating process in your company. Our experienced consultants first analyze your current client environment with you and, in the course of a rough concept, make recommendations on how you should implement Windows as a Service.

### Benefits

- » **Best Practices** - Benefit from our Best Practices
- » **Return on Experience** - We have experience with other companies in different industries and sizes (100 to over 15,000 clients).
- » **Individualization** - the concept is individually adapted to the requirements of your IT
- » **Different solutions** - In the course of the concept different possibilities and experiences are presented and discussed.

V3.0

## Windows as a Service – Operation of Windows 10 with WaaS

### Objective

- » Create the same understanding for Windows as Service and the associated dependencies for the operation of the Windows 10 clients.
- » Individual rough concept for the new operating process
- » Development of a procedure for the introduction of the new operating process

### Our services

- » Analysis of the initial situation taking into account the following points:
  - Current client environment incl. all relevant parameters
  - Management infrastructure for the clients
  - Previous operating process for the Windows clients
  - Your previous update strategy (Windows Updates, Service Packs ...)

» Workshop with approaches to the following topics:

- Preparation and distribution of feature updates - Introduction of a test and pilot procedure
  - Dealing with tests and approvals of software applications
  - Organization of the rollout of updates on all clients (e.g. with field service)
  - Communication within the company and with users
  - Monitoring the progress of distribution
- » Documentation of the results of the workshop as an individual rough concept.
