

SAP Performance Optimization

It is one of the main tasks of IT managers to ensure a permanently high availability and performance of SAP systems. But despite thorough precautions and good maintenance, unexpected performance problems can occur. Help is available with the EarlyWatch™ reports, but interpreting the collected system data requires in-depth SAP technology knowledge and cross-platform expertise. That is why this „Consulting in a Box“ package was developed. We show you how to correctly interpret the recommendations from the reports and thus noticeably improve the performance of your systems. In addition, we measure your SAP transactions and help you to find the relevant metrics and react to them correctly.

Your benefit

- » **Overview:** You receive a differentiated and weighted evaluation for different measuring ranges (DB Cache, SAP buffer, response times).
- » **Transparency:** You know the strengths and weaknesses of your SAP systems.
- » **Faster:** You improve the performance of your SAP systems through increased reliability and improved availability.
- » **Know-how:** You expand your SAP know-how through practice-oriented knowledge transfer in the project.
- » **Extensive:** You receive comprehensive documentation with optimization recommendations

SAP Performance Optimization

Objective

- » Sustainable productivity increase through targeted expansion of your employees' know-how with regard to understanding, interpreting and optimizing performance problems
- » Optimization of your system operation through improved interaction of databases, operating systems, network components and SAP application servers.
- » Cost reduction through optimization of the SAP system and the affected business processes.

Our services

- » We analyze your SAP system step by step and optimize it under the following aspects:
 - Hardware bottlenecks
 - SAP, DB and OS parameterization

- Workload Distribution and RFC Load Balancing
- Analysis of response times and causes for poor response times
- Expensive SQL statements, transactions and programs (long-running)
- » We analyze your EarlyWatch™ reports together with you.
- » We explain what the individual measurement data and recommendations mean and how they can be interpreted and implemented.
- » We plan the targeted implementation of the recommendations with you.
- » We document the measurement results and recommend further project steps.
