

SAP Security Check

SAP systems have a very high security standard by nature. But security never stands still: companies must continually adapt to new cyber attacks and changing IT risks. Only regular security checks ensure that your SAP systems really do meet current requirements. The SAP Security Check by AddOn detects, describes and evaluates security gaps in your SAP systems in three days. The security strategy developed on this basis guarantees the sustainable secure operation of the SAP systems and documents the high security level for auditing and external agencies. This makes the SAP Security Check the ideal introduction to a modern security strategy for SAP systems.

Your benefit

- » Reduced risk of cyber attacks
- » Proactive protection of business critical resources
- » Reduced administrative effort through security standards
- » Presentable documentation for the management, revision and audit
- » Improved credit rating (Basel III)
- » Minimized liability risk

AddOn

SAP Security Check

Objective

- » In a security assessment we analyze the entire technical SAP NetWeaver environment: network, operating system, database and the security mechanisms implemented in the SAP systems.
- » We document existing weaknesses in a detailed report.
- » Together with you, we develop a strategy for the secure operation of your SAP systems.

Our services

- » Check your current security level:
- » up to three SAP systems (e.g. DEV, QAS and PRD) for compliance with security precautions
- » for compliance with security guidelines and specifications in SAP Business Suite systems (ERP, BW, CRM, etc.): at operating system and database level, during installation,

in transport management, in the authorization concept, in the integration of in-house developments, in integration of Web functionalities and in internal and external access

- » We will prepare a detailed documentation and present the results of the security check to you.
- » According to the priority of the detected deficiencies we recommend immediate measures for danger prevention.
- » We advise you on additional project steps to create a modern security level.
