

# SuSE Manager for SAP Infrastructures

Patching security vulnerabilities on Linux systems is just as important as patching Windows systems. However, it is a time-consuming and critical process to log on to every single Linux system, obtain the latest updates from the manufacturer and install them untested on all systems.

This is where SuSE Manager comes in. It simplifies the software distribution, the import of updates/patches, the administration of configurations or inventory. This saves time and money. Administrators are relieved of their daily standard tasks. Since SAP HANA is based on Linux, the SuSE Manager can be optimally used for the administration of the operating system.

Our consultants work with you to analyze your infrastructure and create the best solution for you with SuSE Manager. Benefit from our know-how.

## Benefits

- » **Secure:** Your systems are always up to date
- » **Time-saving:** Reduced administrative effort for software distribution, updates and configuration
- » **Comprehensive:** Clean patch management across the entire Linux landscape
- » **Specifically:** Assignment of patches to CVE vulnerabilities
- » **Supporting:** Central management of configuration files
- » **Individual:** You receive a solution that is optimally tailored to your company's needs.
- » **Relieving:** Central management of your SuSE Linux system environment as the basis for SAP HANA
