

# SAP Fiori Authorization Concept

Companies which decide to use SAP Fiori often want rapid integration and underestimate the know-how required to ensure optimal and trouble-free operation. To avoid annoying errors and performance problems afterwards, a well thought-out authorization concept is essential. It clarifies questions about various Fiori catalogs and Fiori groups. Responsibilities are also regulated, e.g. who defines the Fiori tiles. You also use this concept to determine how the Fiori roles are distributed (FI/MM/SD roles).

With this „Consulting in a Box“ package, our certified SAP consultants work with you to create an optimal authorization concept that covers the various aspects of the SAP Fiori roles and authorizations. Your employees accompany us during this process.

## Your benefit

- » **Time saving:** Save time when setting up roles, permissions, catalogs, groups, etc.
- » **Cost reduction:** Reduce the effort for your support to correct misconfigurations or to manage catalogs and Fiori Apps
- » **Know-how:** Profit from the cross-system know-how of our certified consultants
- » **First class:** Get first-class advice from experienced experts.

## SAP Fiori Authorization Concept

### Objective

- » Each end user only sees the Fiori Apps he really needs
- » Each Fiori catalogue contains only those Fiori Apps that are really used in your company and work without problems
- » Optimized roles in terms of performance, overview and personalization
- » Avoidance of uncontrolled growth

### Our services

- » Joint development of the authorization concept with your authorization administrators and key users
- » Creation of an authorization concept, included
- » Individual naming convention
  - Clear separation of technical and business catalogues/groups/roles
  - Authorization concept with clear division of tasks and clear definition of roles and subsets

### Additional services package\*

- » Fine concept for authorization with clear division of tasks and clear definition of roles and subsets
- » Recommendations for optimizing the Fiori configuration and performance
- » Recommendations that can be implemented immediately are dealt with as part of the concept
- » Support during implementation: setting up example catalogues/groups/roles

\* Chargeable according to scope and agreement
