

SAP HANA Scale In

Take your SAP HANA database to the next level with "Scale In". The SAP HANA database was installed as a "Scale Out" system at the time of its release in 2011. Since then, much has changed in IT and modern software and hardware now enable companies to transfer SAP HANA "Scale Out" systems to an SAP HANA "Scale Up" database. This process is called "Scale In".

With this "Consulting in a Box" we support you in your "Scale In" process. We take into account all the challenges that can arise during the conversion or transfer from a distributed system to a central database. Thanks to the extensive experience of our consultants, you receive the optimal strategy individually for your SAP system landscape.

Your benefit

- » **Simple:** Simplification of the SAP HANA landscape and processes
- » **Central:** Central SAP HANA database
- » **Faster:** Reduction of network traffic
- » **Better:** Optimization of hardware resources
- » **Current:** Renewal of the SAP HANA database
- » **Powerful:** Housekeeping / Performance optimization of the SAP HANA database
