

# Patching-as-a-Service for vSphere Infrastructures

For many companies, patching is a tiresome but very important issue. Because the topicality of the systems influences their security. Hackers take advantage of security gaps that arise due to missing or poorly installed updates for attacks. They penetrate your IT structures, manipulate data and access confidential data.

To prevent this, a well-structured patch management is the optimal basis. However, administrators often lack the time or simply the know-how to implement them to the desired extent. With our support, you can expand your patch management in such a way that you minimize security risks in the long term. It is possible to accompany you during the one-time setup of patch management or to outsource patching to us as part of a managed service.

## Benefits

- » **Competent:** Experienced consultants carry out updates
- » **Safe:** Errors are eliminated at an early stage
- » **Time-saving:** Optimized patch management or outsourcing of updates
- » **Risk minimization:** Systems are up to date
- » **Extensive:** Inclusion of the entire VMware vSphere environment

## Patching-as-a-Service for vSphere Infrastructures

### Objective

- » Save time by optimizing patch management or outsourcing the process
- » Trouble-free operation through clearly defined processes and updated VMware infrastructure
- » Greater security through troubleshooting and regular updates to the VMware vSphere environment

### Our services

- » Version analysis of VMware vSphere components
- » Compatibility check with hardware and third-party software, such as backup, etc.
- » Documentation of results and recommended actions
- » Creation of backup/snapshots
- » Download and patch one VMware vCenter Server and five VMware ESXi
- » Testing the functionality of the environment
- » Patching of Third-Party software and hardware firmware on request
