

SAP HANA Patch Management

Have you recently switched to SAP HANA with your systems and want to be prepared for emergencies? However, you lack the time or the know-how to implement your patch management to the desired extent? Patching is an annoying but very important topic for many companies. Hackers use security gaps caused by missing or poorly installed updates for attacks.

To prevent this, a well-structured patch management is the optimal basis. With our support, you minimize security gaps in the long term. We plan the patching of your Linux or HANA systems for the coming year and implement it together with you. This keeps your systems up to date and you benefit from the know-how transfer of our consultants. You will also receive a documentation that you can use to patch additional systems.

Your benefit

- » **Security:** Your systems are always up to date.
- » **Documentation:** You receive a documentation adapted to your patch environment.
- » **Competence:** Benefit from the many years of experience of our consultants
- » **Cost advantage:** Minimize time and cost for updates
